Developing a Social Media Strategy for a Small Non-Profit Organization: More Conversation, Less Marketing

Audra Lawler and Sara Anne Hook
Indiana University School of Informatics and Computing

Abstract
Right Sharing of World Resources (RSWR), based in Richmond, Indiana, is a successful microfinance organization that empowers marginalized women in Kenya, India and Sierra Leone. Although established in 1967, RSWR remains a small organization compared with other NGOs and has not had the time or expertise to update its website or to take advantage of the power of social media for outreach and public relations. The first project was to complete a total redesign of RSWR’s website as well as a new branding campaign. This project is to develop and implement a social media strategy that will enable RSWR to better communicate its message to its target audiences, such as donors, volunteers and the public at large. Building on the methodology used for the website redesign project, I interviewed key players and investigated social media best practices, specifically the social media approaches of small firms and non-profit organizations. Among my findings is that an organization should have a written policy and limit the number of people who can publish social media content. A social media strategy must be dynamic and there should be at least one person dedicated to content management. Content must be fresh, sincere and purposeful, never arbitrary or perfunctory and should be consistent with RSWR’s overall branding efforts and public persona. This same methodology for developing a social media strategy could be used by nearly any small entity that has to be very judicious in how it communicates through 21st century technology.

Introduction
Microfinance, also known as microcredit, is a financial service that offers loans, savings and insurance to entrepreneurs and small business owners who don’t have access to traditional sources of capital, like banks or investors. The goal of microfinancing is to provide individuals with money to invest in themselves or their business. Microloans are typically lower than the average business loan (Business News Daily). Microfinance in developing countries is important because it helps individuals support themselves and gain financial security. It boosts the economy of communities and helps individuals to start their own businesses. According to former Secretary General of the United Nations, Kofi Annan, microfinance in developing countries plays an important role in the eradication of poverty.

Right Sharing of World Resources is a Christian Quaker organization motivated by the calls to justice and right sharing. They partner with local organizations to provide grants to jump-start micro-enterprise ventures for female entrepreneurs in the developing countries of Sierra Leone, Kenya, and India. People in the developing world often have little or no access to cash. RSWR grants provide seed money which is recycled within a community. RSWR supplies each project with no more than $5,500 per year, the idea being to provide enough capital to begin a small business. After receiving RSWR funds, organizations and communities are frequently able to obtain local funding. By giving small grants, RSWR is able to help women begin as many projects as possible with limited financial resources.

Like many small non-profits, Right Sharing of World Resources is a worthy and valuable organization with very limited resources. How can a small organization such as Right Sharing of World Resources effectively utilize the limited resources at its disposal to take advantage of social media and maximize the reach of their message?

Material and Methods
Building on the methodology used for the website redesign project, I first began by familiarizing myself with the organization. I explored the Right Sharing of World Resources website and investigated their current internet presence. I then spoke to Right Sharing of World Resources employees to learn about their organization and their current social media strategy. This conversation served to find what the organization is hoping to achieve from its social media and to determine what personnel and time resources the staff at Right Sharing of World Resources believes that they can devote to social media activities. I also spoke with the graduate student who had redesigned the website and she familiarized me with her processes and experiences.

I identified comparable organizations whose social media presence could be studied and analyzed. Comparable organizations were broken into many categories: Quaker organizations, non-profit organizations with similar missions, very small organizations with under 10 employees. Special attention was paid to organization within the same Midwest geographical region as Right Sharing of World Resources.

I performed research investigating social media best practices for non-profits and small businesses. I read blogs and articles discussing this. I also conferred with a social media expert from Carnegie Mellon to glean insights into social media best practices for small non-profit organizations.

Below is a before and after of the recent design changes to the RSWR website following the first part of this ongoing project.

Results

Brand Control
It is important to control your brand and have a consistent and uniform voice representing your organization. Organizations should have a written policy outlining how social media should be used and the number of people who can publish social media content should be limited.

Sincerity
Content must be fresh, sincere and purposeful, never arbitrary or perfunctory and should be consistent with RSWR’s overall branding efforts and public persona.

Content Generation
A social media strategy must be dynamic and there should be at least one person dedicated to content management. RSWR should post more frequently. Currently their Facebook only shows two posts from 2017. Like many non-profits, RSWR likely has many stories that they can share which would make for engaging content.

Conclusions
This same methodology for developing a social media strategy could be used by nearly any small entity that has to be very judicious in how it communicates through 21st century technology.

Moving forward in my research study, I will continue to isolate examples of comparable organizations. I will contact similar organizations and see what their staffing size is like and try to determine how many hours a week can realistically be expected for a successful social media strategy. Once I have completed my research I will present my findings to Right Sharing of World Resources so that it can consult its staff and board to see whether they might be able to support some of these social media strategy suggestions.
