

## Acknowledgements

I am indebted to so many, but I especially wish to acknowledge the efforts and encouragement of my family, my thesis committee, my professors and my employer. First, I am grateful to my loving wife, April, for being my inspiration and motivation through what has been an arduous four years of graduate study. I thank my parents, Jack and Shirley, for their continued love and support. I am forever grateful for my caring, patient, and supportive family.

Thank-you also to the members of my thesis committee for your guidance and encouragement. Dr. Eric Meslin introduced me to this fascinating topic, inspired me with his enthusiasm and aptly directed this project. Moreover, I appreciate the assistance of Dr. John Tilley - whose door is always open and who was always willing to offer advice, suggestions for improving my thesis or just lively conversation. Likewise, I thank Dr. Timothy Lyons for helping me to improve significantly the philosophy of science and epistemological aspects of this thesis. I have greatly appreciated the comments and suggestions offered from this group of scholars.

I would feel amiss if I were to omit acknowledging the instrumental role of many other of my professors, especially my dear friend Dee Seketa of DePauw University. Additionally, Dr. Marthe Chandler of DePauw University broadened my interests beyond biology and into philosophy. Furthermore, I am grateful to Dr. Jason Eberl for his assistance and advice throughout my graduate studies.

Finally, I wish to express gratitude for my employer, Dr. Joe Wheat, for generously funding my graduate education and giving me the flexibility to take classes while working. Without his generosity I would not have been able to achieve this degree.
