Brainstorm 1
Which people and what skills are needed to implement and maintain an IDR?

1. Make a list of the people in your library that you believe would be interested in getting your IR off the ground.

2. Make a list of the skills you believe you will need to assemble. Consider as a group at your table:
   - Subject expertise
   - Database design
   - Interface design
   - Metadata and/or Cataloging
   - Information organization
   - Institution/University-wide communication skills (ie political pull)
   - Institution specific considerations

3. Match the people and the skills between your first and second lists. Who in your first list owns the skills in your second list?

4. What necessary skills remain? And how will you attain the people with these skills?
